

ABSTRACT OF THE DISCLOSURE

METHOD FOR PREPARATION OF A FLUOROAROMATIC COMPOUND
FROM AN AMINOAROMATIC COMPOUND

5

The invention relates to a method for preparation of fluorinated aromatic compounds from the corresponding amines by replacement of the amino group with a
10 fluorine atom. The method of preparation of a fluoroaromatic compound from an aromatic compound with at least one amino group on the aromatic ring is characterized by the reaction of said aromatic amine compound with a nitrosating agent in the presence of a
15 source of boron trifluoride in an organic medium, and carrying out a thermal treatment of the reaction medium comprising the diazonium salt thus obtained to give the fluoroaromatic compound directly by decomposition of the diazonium salt without intermediate isolation
20 thereof.
